Macro recorder and editor. If you record a command for a standard keyboard shortcut that is not already available, add it to the macro. You can add it to a hotkey, desktop action, window or even specify the text input, hotkey or mouse click that you want to trigger. The macro can be scheduled for execution at startup, or run on demand. You can use hotkeys, menu actions, text boxes and even mouse clicks to activate your macros. You can also view the text you want to input, to see if it is the correct format and is a valid command for the particular action you are recording. Macro commands are stored in a keymap file, and may be selected by name from the list in the top left. You can use the hotkey column to quickly select the hotkey you want to use. You can add hotkeys and desktop actions by dragging and dropping them from the Hotkeys tab to the Shortcuts dialog. You can use drag and drop to drag and drop menu items to make menu items. You can use drag and drop to drag and drop text boxes to insert text. You can use drag and drop to drag and drop windows to move them. Macro state saving and restoring. The keymap file remembers which hotkeys and actions are active when the application is closed and

reopened. The current macro's state is saved when the application is closed and restored when it is reopened. Hotkeys can be recorded into the current macro, or a new macro. A new macro may be created using a keymap file, in which case it is inserted into the current macro's history. Hotkeys and actions can be copied to a new macro. Hotkeys can be changed in the hotkey editor. You can insert text from your clipboard. Command history. The command history is the list of commands that have been performed in the order they were entered. You can use the scrollbar to move through the history. The history displays each command by name, rather than each action performed. The menu action editor uses the command name as a unique identifier. If you perform a new action, it will be added to the command's history. If you enter a new command, it will replace the oldest command in the command's history. The command history displays the current macro's state as well as the current command's state. You can use the command editor to edit commands that have been recorded. The command editor's actions are specified with a series of keywords and parameters that are passed to the 1d6a3396d6
