Note If you don't know what layers are, you may be surprised to find out that you can use most of the Creative Suite in a limited capacity without knowing how layers work. If you're just starting to learn the program, it's definitely good to know layers and how they work. If you're an advanced user, though, you'll find yourself more familiar with other aspects of the program anyway. # Browsing your Photos

Jensen Ackles: 'The most important job is being a father' Jensen Ackles says he is enjoying fatherhood, but confesses his wife, 31, has an easier time of juggling the demands of being a mom and career than he does being a dad. "She gets to come home and her life is changed, whereas I come home and I'm just like, 'I'm tired, and nothing's changed,'" Ackles tells PEOPLE. Get push notifications with news, features and more. "I don't see it. She does. When I do get to come home, the house looks different. But she's more excited about it." Since the couple's first child was born in late December, Ackles, 34, has spent more time with baby Silas than the actress, who has also starred in TV shows including Gilmore Girls, was previously accustomed. Image zoom Silas Jensen Ackles Image: Courtesy of Jensen Ackles Ackles and fellow The Secret Circle star Misha Collins are both devoted dads to young children, but the actor, who is father to adult sons Lennon, 23, from his first marriage, and Ramon, 28, from his second, admitted: "I'm a lazy dad."Domain-based pattern detection systems are well known in the art. They typically are used to implement one of several related pattern detection methods. One such method is disclosed in U.S. Pat. No. 3,862,682 to Bleier and assigned to the assignee of the present invention. The method described therein is used for automatic data entry and is referred to herein as the homogeneous matrix pattern detection method. The method and the system implemented therefor disclosed in the above patent does not utilize a pre-established pattern library as an input for establishing the outline of a particular pattern to be matched. Instead, an operator defines the generic shape or outline of a particular pattern to be detected. Once this generic pattern is defined, it is superimposed upon each incoming image, and a previously stored outline pattern is then compared to the superimposed generic outline pattern on the incoming image to see if the two outlines match. If they do, then the generic outline is said to match the specific outline and is accepted. If, however, the two outlines do not match, then a generic outline is

Q: 2D Convolution with large matrices How to properly perform a Convolution in python? The problem I face is that I have to perform a 2D Convolution with a huge matrix, approximately 200Kx200K. This makes the number of operations run more than 200000000. I am using Numpy, but from what I understand it doesn't do it in parallel, so it will run like it was running in one thread. Is there any other packages that are doing this in a more efficient way? Any ideas will be appreciated. Thanks. A: There's a special way of using matrices in numpy: import numpy as np from skimage import data, filter image = data.arange(64 * 64 * 4) # I don't know the data format you use filter = np.ones((5, 5), np.float) * 0.5 mask = np.zeros((64, 64), np.float) mask[:50, :50] = 1.0 filter[mask] = image[mask] Original answer of 2017-04-04 For very large matrices, you can use the threading module to make better use of multiple cores. This will be significantly faster than the classical way of doing things. e.g. from threading import Thread import numpy as np def conv2d_thread(kernel, image, mask): threads = [] for ii in range(kernel.shape[0]): for jj in range(kernel.shape[1]): img = image[ii, jj] mask[ii, jj] = 1.0 img = img * kernel[ii, jj] mask[ii, jj] = img threads.append(Thread(target=img.copy(), args=(mask,))) for t in threads: t.start() for t in threads:
