What is LicenseChecker: Simple, compact, unique software Nowadays you can hardly find a computer that doesn't have an open source program installed. This leads to a growing pool of freeware, which usually lacks some important features. While its main purpose is to check the exact version of a program installed on your PC, LicenseChecker is also handy in finding out which software is legal and which is not. What makes LicenseChecker unique: 3 search modes Licenses, per-program, or program list LicenseChecker features 3 modes for searching and filtering out all available applications: Program search Program license search Basic program list Search a specific program LicenseChecker uses 3 methods of finding programs: Direct search in the Windows directory and subdirectories Application-specific search Program list You can pick what type of search suits your needs the best. If you prefer to keep your search settings private, you can manually enter applications, licenses, or full names of files in the search. Detailed results LicenseChecker presents you with detailed information about the application's version, licensing, price and the information it provides about the program's compatibility and features. You can check if a program is free, trial or offers a limited version, too. When you're scanning a program list, LicenseChecker shows the amount of space a program occupies and in what folders it resides. How to install LicenseChecker: LicenseChecker can be downloaded and installed on any Windows PC as a standalone application. Tool to read serial numbers of pre-installed hard disk, serial numbers of ports and fix serial numbers of ports. KEYMACRO Current Version: Version 2.4.6.0 - 2017-09-21 License: freeware Use License: freeware Source: Usage: By default keymacro will run in tlk mode which means it will read the serial number from the first hard disk and will not look into the serial number of ports and fix port serial numbers (even if they are already read with keymacro). You can also go to the settings/advanced settings/serial number mode and change it to tlp (port serial number mode) and kcp (hard disk serial number mode). Sample #1 (Setting Serial Number Mode): 1- Open the dialog box to set serial number mode by clicking on "Settings" and "Advanced settings" buttons at the same time, just as seen in the picture below. 2- Set serial number mode to "tpk (hard disk serial number mode)" or "tlp (port serial number mode)" in the serial number mode menu, as you see in the picture below. Sample #2 (Sample Serial Number): 1- Click on the hard disk as seen in the picture below to select it for serial number reading. 2- Click on the "Settings" and "Advanced settings" buttons at the same time, just as seen in the picture below. 3- Set the serial number mode to "tpk (hard disk serial number mode)" in the serial number mode menu. 4- Click "OK" button to continue. Keymacro reads serial numbers of all hard disks at once and will not look into the serial numbers of ports and fix port serial numbers (even if they are already read with keymacro). Keymacro currently supports serial numbers of most of commonly used hard disks of windows. Keymacro currently supports serial numbers of most of the commonly used ports of windows. Other features: Change text size and save the text to the documents file. Detect serial numbers of workgroups and save them to the documents file. Create a shortcut to the documents file (or open it in the document viewer) which can be used for easy installation of the software. Change desktop icon if the software is not already on the desktop. Change 77a5ca646e
