Passing a variable into div tag This is my java script `$(function(){ $("button[name='addInput']").click(function(){`
`$('#divA').append(""); }); });` This is my HTML. What I want to do is to add an input checkbox into divA and then an input
checkbox and a divB into divA. This is my current functionality. I know its because I have duplicate IDs. This is a problem that I
can't seem to solve. How do I pass a variable into the div tag? I know I can pass the variable into the input tag but I would like to
keep the input tags and divB as a variable. Is this possible? A: You could store your elements in a variable and then use that
variable when appending the elements to the #divA. Here's how you could do that: `$(function() { var $divA = $(""); var $divB =`
 `$(""); $("button[name='addInput']").click(function() { $divA.append(""); }); });`
