The ObjectARX library is used as the engine for AutoCAD's customization and automation capabilities. ObjectARX can be used either as a standalone API or as part of AutoCAD via the command line. Among the customizations that are available to AutoCAD users are: User-defined rendering of areas (UDR) and objects Non-standardized routing Annotation on contour lines Dynamic lineweights Spline interpolation User-defined rendering is accomplished via a set of commands available through the ObjectARX API. This is used to create shapefiles such as the following: When rendering an area or 3D object, different colors can be used to distinguish between different types of surfaces. I have the following commands in my.bashrc: alias I=Is -la declare -f I Why is the output of declare different from the output of alias? A: declare -f l produces this output declare -x l='+' whereas alias l=ls -la produces this output declare -x I='+' Alias expansion is one of the most powerful features of the shell. Many commands are aliased to other commands, and there is a choice of how to deal with the result. Some commands will always expand to a single command, some expand to a list, and some such as alias will even expand to multiple commands. declare is similar, but is a bit different. Its expansion is controlled by the declare statement itself, which is parsed, and all variables are declared as they

are encountered. This can cause problems in cases like # declare a bogus variable declare -x red='\u1b[0m' where bash considers the red variable to have no value. The declare command will never "get out of the block" and is usable in multiple declarations. There is one difference in the behavior between alias and ca3bfb1094

Check out Autodesk's blog and Facebook page. And now for something completely different... A quick, clever followup: We're always on the lookout for new ways to deliver exciting content, and today we want to introduce you to a project that takes AutoCAD entirely outside the realm of traditional CAD. It's a big picture drawing that shows how AutoCAD, Autodesk's legacy CAD program, will be used in a brand new way. We're calling it "The Big Picture," because it shows how people will use CAD in a totally new way, for so many different applications. We'll let you in on the project when it's ready, but in the meantime, here's a hint: It's not for CAD! Keep reading for a teaser! OK, now it's time for the big reveal! Spoiler alert: The Big Picture is a new project that will be presented at Autodesk University at Autodesk University in Boston, on October 11-12, and will be on display at Autodesk University in Las Vegas, on October 10-11. If you're interested in following along, we'll be providing more info throughout the week — including, yes, more teasers. In the meantime, take a look at this teaser: The Big Picture video teaser This is an old colleague of mine, Dave (davem at miniindium dot com), who is doing
