History AutoCAD was originally developed for the popular Apple II microcomputer, as a replacement for IBM's Draw, a drawing program called Spin for the Smalltalk-based Star computer and UCSD P-Systems' PDD drawing program. The first versions of AutoCAD were written in Lisp. AutoCAD was the first major feature-based application to use LISP, but it was not the first application written in LISP. Designer Keith Henson had developed a similar application called Lisp-Writer in late 1979, and he had modified it to work with a PDP-10 via a Programmed Data Processor. Designer Tom Thacker and programmer Michael Khoo had converted LISP-Writer to use PDD, a PDP-10-based drawing program. A LISP-based product called Programmed Data Designer (PDD) was also being developed, and a LISP-based SP-10 product called LISP's Designer was being developed at the MIT Star Lab. LISP's Designer was based on PDD. Eventually, LISP's Designer was renamed to LISP-Paint, and they used the LISP-based language called PCL to port it to the SP-10. AutoCAD, Lisp-Writer, PDD, LISP-Paint, and LISP's Designer were all later called PARADIGM by Technologic Systems of San Mateo, California (TSSM), which sold these products to the Wang Corporation. In March 1980, TSSM began developing a commercial LISP-based product called SP-10/Lisp, and the first version of SP-10/Lisp was released to the public on January 1, 1982. TSSM eventually began marketing SP-10/Lisp as LISP/SP (see below). LISP/SP also had LISP-based versions of Lotus 1-2-3 (LISP/Lotus 1-2-3), Deskwriter (LISP/DeskWriter), and WordStar (LISP/WordStar). LISP/SP was renamed to LISP/MicroStation in 1985, and MicroStation was the name of the LISP-based editor created by TSSM for LISP/MicroStation. In October 1988, TSSM began marketing LISP/AutoCAD, an LISP

The rest of the process is as described by the old answer. A residential neighborhood. This elegant Italian villa was built in the 1930s as a summer getaway for American and European intellectuals and writers. In the decades since, the neighborhood has become increasingly attractive to people in the arts and creative industries. From an early age, I have been fascinated with the visual arts and, as I grew up, I became increasingly involved in their creation and representation. I have always been particularly interested in sculpture and have exhibited my work in several shows in the NYC area and abroad. With so many opportunities available today for artists and creative professionals to live and work in the city, I was always attracted to the Greenwich Village area, where I have been able to make a living for the last 25 years, and ultimately decided to live and work in my current loft. The renovation of my home was made possible because I was fortunate enough to meet and work with an architect and a general contractor who also happen to be dear friends of mine. They are both supportive, knowledgeable, and professional people who helped me create the home of my dreams. The space where I live is one of my most cherished possessions, and it is important to me that the environment that I live and work in reflects my interests and my personality. It is also important to me that
