This game gave me a difficult decision at release, based on some of its content - it's far more forgiving than I anticipated, though it has a steep learning curve, but also an amazing scope. You can't help but marvel at the sheer scope of this game's engine. It would

be a game for the ages, of that I have no doubt. As a demo it's brilliant, but I am hugely looking forward to a full release, which will surely be my choice, as it may have been with others, but in truth it's my favourite demo I've seen in quite a while. As I start off, I'd like to thank Creative Apocalypse for their beautiful cinematics, and also for hooking me up with this demo, but most of all, thank you to the developers for creating this awesome game. Please keep making games like this, as you never know, you might be the next BIG THING. In the first 5 minutes, you're plunged into an RPG world and given a chance to survive. It's totally dark, but the sound and music enhance the atmosphere so that you can feel really involved, but also know that you are in a safe and secure place. The game opens up, and you make your way through the first area, and another 4 or 5, and then it starts to get a little dicey. Why would it be dicey? Well, because of the way the developers have built the world. Here is an example, you pass through a town, and notice that you see that houses are all connected, through a set of staircases. From one town, to another, or even to the rest of the world, you can do it safely. What I am saying is that there's a clear way to do it, the developers have obviously thought about how this works. However, once you get past town and start to travel the wilderness, you realise that some of the key story elements take a bit of a strange turn. Suddenly, you find yourself in a forest, and you don't know where to go, or what to do. There is no explanation given, just a massive, clear map, but at the moment there's no telling where you are, or what

Ready to take the first step? Try it free today! Visuals Fatal Gem VR is designed from a visual standpoint with pure priority placed on the player's immersion experience. The game uses an isometric viewpoint instead of a traditional top-down view. This enables game developers to show off the 360 degree view of what's happening in the game and the space around the player better. But more importantly, this type of view can help support the best immersion experience by making it easy for the player to orient themselves relative to the game and environment. While isometric is one of the more faithful methods of presenting 360 degrees, I saw it as a perfect fit for our game setting. Another major game convention is the use of jagged edges, crisp textures, and physics-based events. In Fatal Gems VR, we did our best to replicate these sensations, and you can see it in the screenshot above. Sound As with the visuals, the game uses a top-down isometric view. This means less game information going from the left to the right, and more from the bottom to the top. But when using the isometric style, sound plays front and center. Even though the auditory is one of the least important for immersion in a first-person VR game, when done well, there's a rewarding and satisfying experience. In Fatal Gems VR, sound is important to help you play the game, and telling how each game tiles is a fun way to help you track progress and finish the game better. Why We Chose 360 Input 1. Boundless 360-degree Experience Using controllers isn't the only method for having 360-degree gaming experiences. That is in large part due to a lack of classic controllers. Gamepads are used all over the place these days, and while they certainly make for a better experience than using a

mouse, the reality is that they're almost never with gamers in their home or office. With so few controllers being used it's a real pain to play games like Unreal Tournament

Do you want to find out how it would be if a young romantic, sent to the farthest corner of the world, had to face a lot of things that have already arisen? Things that are beyond his control. The young man named Graeaeon has just arrived on a visit on the planet Arvory. To be with his boyfriend, Erik - and prepare the graduation from the high school. Graeaeon has been sent to this faraway place to prepare for his senior year of high school and for his graduation. At first he doesn't even know about the existence of this planet. But after he learns that it is the only planet of the Solar system without intelligent life, he decides to come to this planet and study. Graeaeon lives with his friend Niomi, with whom he always could discuss everything freely, because Niomi has exactly the same knowledge of the situation as he does. Graeaeon quickly learns that Arvory is a planet with extreme laws of war. These laws were established by a great conqueror, but many centuries have passed, and a new king has ascended to the throne. This king is an old-timer, deeply afraid of death, and not in a good

mood. Having understood the situation, Graeaeon decides to help the elders in various ways. But it's all useless... One day, the young man suddenly begins to see strange things on the streets. People begin to attack and kill each other. And the atmosphere is now growing darker. Only two people are trying to keep the peace - Graeaeon and Niomi. Yet, despite all their efforts, they can't stand the situation on the planet. Arvory is really a fascinating planet, with a lot of peculiar things. All right, it's a planet destroyed by the wars. But that was a long time ago. A lot has changed. Perhaps everything could be repaired... Graeaeon's arrival in the world Arvory changes the course of history of this planet. He has to deal with many questions of the existence of mankind, with the fate of the people that lived on the planet, with the nature of the world - and to do it as fast as possible. Is it possible to get out of Arvory alive? You will need to avoid any obstacles placed in your path, because you will probably be killed in the process. So you have to find what is preventing them from getting at you. But this is
