Kali Bugs Kali Bugs are a live American punk rock band from Los Angeles, California formed in 2005. The band, formed by Greg Hetson, were the first signs of Greg's return to playing guitar after a lengthy hiatus. Their members included Seth Lorinczi (vocals), Greg Hetson (guitar), Evan Olarsi (bass), Dan Kuehn (drums), and Joshua Edwards (guitar) till they became a full-time band. After signing to Fat Wreck Chords in 2007, the band released its eponymous debut album in 2008 to mostly positive reviews. The record included two singles, "Low Life" and "I Hate That I Love You", the former charting for 6 weeks on the Rock chart. In April 2008, the band released its first 7" split with Poison Idea, a cover of the band's song "Red Black and Dead" as a b-side. In 2012, the band took a break due to Hetson's health issues, after which the band reformed in 2014 with new singer Joelle Raspanti (of the band The Pretty Girls). Their most recent album, Human Chaos Machine, came out in 2016. "It was a good, fun game. It is a good JRPG and I recommend it to everyone who likes JRPG" -MacKennac "It is a fun game with interesting characters and beautiful graphics but it lacks a memorable music " -mysyn "The major thing I like is that you can combine your units, you start off as a basic warrior and you can build up to be a powerful warrior." -AidanIMBA89 "The graphics are very beautiful especially at full screen.." -silver_dw "graphics are gorgeous :)" -Tyrant "It is a good action rpg with a fair twist. Buy for yourself if you like the genre" -RPS_Talkback "That is the same game that was released when it was called 'Eden Ring'. Those who wanted to get into the Cracked Elden Ring With Keygen did not really want to get into this game due to the action elements added to the game. This version is an action RPG with a different story. Yet the graphics are great, so if you want to get into this game, buy this." -Avi "graphics are beautiful, story is very interesting, non linear story I think it's great and I will buy and play it" -Jackie_Joyce "The story is quite interesting... the graphics are good but there are a lot of bugs... it is much easier to play as a female character than a male character..." -Cameus "Overall, I enjoyed the game. The story is interesting and the game-play is worth a try..." -DeathWise "This game is a mixture of Odin Sphere and Final Fantasy... it might not be for everyone but it is definitely worth playing. The best way to describe the game is that you control a set of characters who are fighting against one of the enemy characters in the story.... you will be able to control the characters as you walk around, talk to them and give them attacks with your hands... the graphics in this game are gorgeous and it is an action RPG game..." -SummerCalhoun "It's a good game that will grab you from the start. You will need to pay attention during battle scenes as the fights are turn-based, which will become cumbersome." -Chris_G bff6bb2d33

Q: What is an efficient way to calculate the value of "sum(a.price*b.price)" in SQL? I am calculating the sum in a MySQL table by taking the sum of the multiplication of the value in a column with the values in another column. If there are multiple records for each product of the sum, the total should be then multiplied by a cost. So far I have written this, but I'm not sure how to take the cost into the statement. SELECT a.title, a.url, b.price, sum(a.price*b.price) AS 'TOTAL' FROM table_a a, table_b b GROUP BY a.title, b.price; Could anyone tell me what is the best way to do this? The table looks as follows: ID title url price 1 Prod A www.a 10 2 Prod A www.b 20 3 Prod B www.c 30 And the expected output would be: title url price TOTAL Prod A www.a 10 220 Prod A www.b 20 220 Prod B www.c 30 60 A: I'm assuming you want the maximum price at a.title? If so, you can't use an aggregate function within the expression being aggregated; aggregate functions can only be used within the GROUP BY clause, or within the SELECT clause after it. You can use a subquery: SELECT a.title, a.url, b.price, b.price*a.price AS 'TOTAL' FROM (SELECT a.title, a.url, max(b.price) AS price FROM table_a a join
