In Firestore, I have a collection with recipes, and another one with reviews. I would like to create a new collection in Firestore, but I don't know how. The problem is that I can not duplicate items under the Recipes collection. What can I do? A: You can't duplicate records under a collection, but you can reference them from different collections. For example, if you have a recipes collection, and you want to add the recipe "Oven French Toast" under it, you could simply create a new collection "Baking Recipes", and add "Oven French Toast" under the new collection. If you want to have a full copy/paste experience, you can simply add a new blank collection and move the data over from Recipes to the new collection with the following structure: Recipes Baking Recipes Oven French Toast Bacon & Eggs Applesauce etc. In this instance, you'll have to use an upsert operation to copy the data over.
