Power of Defense is a tower defense game. The game places you in the shoes of a hero, who has to rescue the Earth from the evil robots and eliminate the threat to our planet. Your hero possesses all the abilities of the Power of Defense robot from your

parallel Universe. You use your strategy to protect the planet against the rising danger. Get help from your allies that destroy robot assaults and attack the enemy with your strongest attack. Keep the defense in tact to conserve your resources. In Power of Defense, you are the hero. You have to use the unique skills of Power of Defense to protect your world. The game does not end when the mission is complete. You can continue to play and extend your defense by improving your build with upgrades. The goal of the game is to keep your world as clean and untouched as possible. The good side helps you in this. - Multiplayer mode - New challenge in singleplayer - New missions in singleplayer and multiplayer - Transistor level & RPG boss - 3 worlds: - Three different layouts in each world - 3 unique sets of robots - Every level has a Bonus level - Multiple difficulties - Different robot upgrades This is not how the story of your podcast should end. Where do I start... After days of fighting for my life on the surface, I managed to

escape underground and connect a ladder to the deep tunnels at a level that was back-doored by a giant mutant that looked nothing like a human being. I climbed down and slowly made my way towards the next ladder going upwards, coming across plenty of horrifying mutants, walking corpses, and flying bats just for fun. It seemed like I made it to the base of the reactor, where I heard the trapdoor creak open and suddenly something madly fast and terrible unleashed itself on me. It actually came out of the trapdoor and ran at me, mouth open, some sort of wormlike thing, and I remember thinking that it might attack me for being different and then it started to bite me, tearing out chunks of flesh. I died. Then I woke up in the robot graveyard, having lost a leg in the battle and having learned a couple of lessons about superstition. I was subsequently fitted with a prosthetic leg, a cyborg healing system, some tech upgrades, a whole bunch of robots, and a whole bunch of cool weapons, and the story continued. In

this one, I took an elevator to the top floor of the reactor
