Himegimi Detective puts you in the shoes of the young and innocent protagonist Sayla Limehult as she explores the city of Neosho with a sense of wonder and the curiosity of a child! Because Sayla doesn't have a magical ability and has been robbed of her power for the time being, she has to utilize her intuition and smarts to outsmart her enemies. When you play Himegimi Detective, you'll never experience that cold, unfeeling sensation of just being a 'hero'. You'll go through a journey that will change your perception of everything, and there are multiple endings to be enjoyed. If you'd like to see more information about the game, please check out www.concursion-studios.com. About Concursion Concursion is the studio behind the unique gaming experience Himegimi Detective. A large part of our existence is spent developing the company's flagship game Himegimi Detective. We have experience creating mobile games and ports in the past, and as a result, can bring a lot of different inspirations together to create games for both new and old fans of Point and Click games! Please feel free to send us feedback by contacting us on our website www.concursion-studios.com. SUPPORT US! WHY IS T ISN'T NAO BETTER? - Polished game engine The ADV+++ engine is capable of running all manner of games, and because it is lightweight, it keeps load times snappy. - Possibilities Unlike other 2D games that force you to choose between different types of gameplay, Himegimi Detective allows you to feel the satisfaction of solving a mystery and the thrill of playing a detective with whichever method appeals to you. - Visual Appeal A polished visual design in 3D is complimented by sprites and backgrounds that maintain the authentic appeal of the source material. - Possible Scenarios No matter how you choose to play, you'll always be in control of the story! - Himegimi Detective is the only game with multiple endings The game will present a variety of decision points for you to experience, and your choices will affect the story. You will never experience an ending where the player will feel they "hit the wall" or feel like the system is "cheating" you. Please visit www.himegimidetective.com for more information. Heartbreaker is a single player storytelling experience using a strong narrative element and gorgeous hand painted visuals for a unique gaming experience. Heartbreaker is set in a post apocalyptic future following an event known as the interdimensional nuclear fallout (IDNF). Following the failure of the first IDNF, humanity has retreated into a closed society and suspended most of the human population on a prison planet called Nova Terra. The player takes the role of the protagonist "Vestra", a former soldier who has just escaped Nova Terra and is now lost on the hostile lands of Xania. During his journey to find his love, Vestra is drawn to a mysterious place called The Sleepers' Valley, where he discovers a device called a Heartbreak Defender. This mysterious device is capable of stopping the hearts of people from the human dimension and sends some of them to oblivion. The player can also form a special bond with the "EPIC-DATA", a strange AI that collects people's data through the Heartbreak Devices. Features: A story driven single player game, Heartbreaker is described as a narrative game, but it doesn't limit the player to a linear path. During the game the player can choose what to do, how to interact with the environment and what direction to go in, all of which will affect the storyline. In the gameplay aspect, the player will be presented with puzzles to solve. The puzzles will challenge the player's logic and good memory skills. In-game assets are hand painted, fully animated and highly detailed to add to the overall experience. In-game music and sound effects are all composed and performed by Robert Aubrey King. Epic, Strangeness and Torment – Three words that perfectly fit the style of the game. Using these words as keywords, the team strived to produce a game that is fun, engaging and immersive. Oh so, we've only scratched the surface! I hope you will take a closer look at Heartbreaker. About The Author Marcin Zabrocki was a Technical Game Designer at Mindstorm Entertainment and has started Crytek Poland. Marcin is now a Freelance Game Developer and works on mobile games with Crytek. He has a deep interest in gameplay design and tries to always make games that are fun and challenging. He thinks that we should start helping each other instead of opposing each other. Support the game! You need to login to support the game. c9d1549cdd

In the 1960s, a devastating war erupts across the world as the US and USSR vie for global domination. As tensions between the two countries soar, the US secretly enacts a plan for a first strike weapon of unprecedented devastation. The ensuing confrontation is known as "The First Strike". In First Strike, you assume the role of a paramilitary commander tasked with overseeing the construction of the warhead. But where the warhead ends and nuclear war begins is anyone's guess. Before "The First Strike" comes to pass, it is vital to ensure the warhead is fully operational, so that it is fully able to deliver the devastating nuclear payload. The warhead is rolled into the launch pad, where you must traverse the warhead's launch tube to reach it's heart: the Superbomb. If successful, you will be greeted by a detonation sequence that can only be witnessed from within the warhead. From there, you are rewarded with an underground city that is home to the warhead's power source. From this spot, you will be able to upgrade and customize the warhead, before a massive nuclear warhead drops from the sky onto the city below. Where 'Nuclear War' ends, 'Nuclear Domination' begins. How to Play: A visual simulation. You play as a paramilitary commander, assigned with the task to construct a massive nuclear warhead before the US or the Soviet Union attack one another. In First Strike, the warhead must be constructed underground, within the massive launch tube. Your mission begins at the base of the launch tube where you take control of a launch vehicle. Your launch vehicle must be fully operational before you can reach the warhead. Once at the heart of the warhead, players can perform four main upgrades: Extension: Allows players to modify the warhead's size, either to increase its destructive force or its shielding capacity. Shield Upgrade: Allows players to modify the warhead's shielding capacity. Weapon Upgrade: Allows players to modify the warhead's destructive power. Reactor Upgrade: Allows players to modify the warhead's reactor, increasing its power. The upgrades only apply to the current device and cannot be applied to the warhead during an attack. To play as a nuclear warhead, players must be revived by a base crew member. Once it is detected, the warhead can be designated as either the defender or the attacker. To declare war,
