Download the Keygen from the website. Unzip it and run the Autocad.exe. (You need a admin user to do that and you need to disable the program security in Autocad first. Go to menu program -> Autocad => Winkey + D => Keygen. (by the way, Winkey + D is the same as Winkey + P - It can help you to find other function keys.) Select the country and the language you wish. When designing, importing, or editing, you may wish to review comments that others have made in the drawing. You can quickly obtain comment feedback via markups, which can be created directly from within the document, or the Message History. The Markup History and Comments sidebar button can be found in the View Menu. Comments can be added to the drawing by following these steps. Create a comment by selecting the Type tool from the toolbox, right-clicking, and then choosing Comment from the pop-up menu. Move the cursor to the part of the drawing that you want to comment. Select View Comments from the Type tool's options menu and then click on the arrow at the bottom of the view to display the Comments sidebar button. Select the comment you want to create, and then click on the Comment button. AutoCAD messages, such as "You have requested to merge [object] and [object]." will appear in the Comments box if you have merged or split lines or objects, or have selected and deselected objects in the drawing. Note: If the message Type tool isn't selected in the Tools panel, you'll first be prompted to select a comment tool before you can add a comment. In this example, you see a comment with some feedback on a type style that was applied to some lines in the drawing. Creating and Managing Groups and Subgroups: Create and manage groups of objects, subgroups of objects, and groups of subgroups. Create nested subgroups, assign users to subgroups, and grant permissions. (video: 5:02 min.) Groups are used to organize and identify one or more related objects, and subgroups are used to organize and identify a group of one or more related objects. Groups are used to enable you to assign permissions and labels to a group or subgroup, or to act as a collection for comments. In this example, you see a group named 'Standard Lines' that contains the following elements. You can add, remove, and edit groups. To add a group, right-click on the Group button in the Groups & Subgroups panel, and then choose New Group from the pop-up menu. In the Add Group dialog box, enter a descriptive name for the new group and click OK. To remove a group, right-click on the group name in the Groups & Subgroups panel and
