
Sony Acid Music Studio 7.0a [RH] Full =LINK= Version

this is the best acid has ever been, and the best it's likely to be for a long time. the sounds have been upgraded, the interface has been redone, and the software now feels more like pro, and not at all like the early versions. this is the version that makes acid a viable option for beginners, and even for more experienced users. if you want to learn how to get the most out of your music with your mac, this is the version to get. with a huge library of instruments, effects and presets, it's also one of the best music making programs you can buy. the acid playground allows you to try out new plugins as you learn about them, while the sound series loop library has a similar selection to the pro one, and is a great place to start. of course, your time with acid is going to be much more productive if you have an external sound card, or if you can make the most of the internal speaker. the software plays nice with a usb-connected soundcard, and will spit out a sound for each input channel, but that's all you can do with the internal speaker. if you have a usb-connected soundcard, and a good collection of instruments and effects, you'll find yourself using two programs: ams for recording your own tracks, and acid for controlling your music. and that's what we'd like to do. the programs worked just fine with both old and new mp3 files, so i didn't have to do any more. i've not used it long enough to get to know how it works, but i'm sure it will be a great tool for all sorts of music creation in the future. i've spent some more time with sony's new software. you can do a lot with this, but i think that the interface is too complicated. i'll be honest and say that i'm not very good at using software on the computer. however, i'm fairly good with computers in general, so i can at least try to use it. i've also played around a lot with some of the effects that are included. here's what i think.
