But, I must state that on opening Lightroom 5 for the first time, if you've just viewed your images on your PC's display, it may take a long time for Lightroom to fully open. Effectively, you might need to start the process again. Most of the time, though, Lightroom 5 runs just as fast as I expect it to. In many cases, I find that performance is better than in Lightroom 4—and that's saying a lot. Sometimes I find Lightroom 5 a little sluggish when Importing/Exporting photos. It seems every other or so, Lightroom begins to stutter and lag when preparing to do something with a large image. It's kind of like having a spinning wheel: Lights, cameras, and motion. However, the mouse-driven Lightroom experience is still remarkably fast. Also, you don't have to use the toolbars of Lightroom 5's interface until you've got a chance to learn where they are. Even when I do use the toolbars, Lightroom 5 still comes across as a well-designed program, except for one overly-protruding icon bar. As for the interface, now that Adobe has put the three-paneled interface at the top instead of in the lower-right corner of the main Lightroom window, it works fine for me. In fact, I find I'm using the sides of the panels more than ever before. I also hope Adobe will make the transition between Lightroom's bookmarks smoother. In the past, when you had multiple images in a folder, you'd go to one to select it, and then you'd have to click a new button every time you wanted to open its images. In Lightroom 4, the key to choosing an image from a group was mapped to the keyboard command Ctrl-Click—a shortcut I'll never take off. If you don't use that keyboard command, you miss a lot of flexibility. For example, If you're assembling a huge holiday card for a large family, you wouldn't want to have to run around the photo studio and individually select each family member's image each time you flip back to that person.
