The only downfalls of this camera are that it has no adjustable options in terms of aperture size and shooting speed; there's no 2.8x crop mode; and the ISO range is stuck at 100 through 3200. The lack of Movie mode isn't a deal-breaker since Lightroom has improved camera support, and you can always setup the camera to use the DNG Raw conversion codec instead of the compressed DNG format. This year's 10-megapixel full HD video mode is higher-resolution than the other Nikon DSLRs because it also features the On-the-Fly-Image-Transformation (IFT) function. IFT is a video-capture feature that steadily cross-samples the entire image before any video is recorded, and then crops in to remove the original image. IFT can be turned off in the 60fps option or turned on in the 24-fps mode. Having a backup is a good way to ensure that all your edits and images are safe, but it's also a reminder of how much of a failure backup can be if you're not careful. Keep an eye on the assets you're working with, and backup often. Also known as Actioncam, it's a beefy waterproof camera that's designed to capture video and audio while you're jumping out of a boat or engaged in any number of water sports. Ropes and other obstacles can also interfere with the shots, so you might want to avoid going out for a yacht trip with this camera. My major concern is that this camera is too expensive. The 640GB storage is better than the average USB stick, but the 1TB option and the $1,995 price point are way outside what I consider practical.
