Other image or photo editing software may be lightyears ahead in terms of features and functions, but if that isn't the case, then it will still be a hassle. Photoshop is lightyears ahead of that! Color layers are great, and there are more than a few editors out there that offer luminosity adjustment layers, but most times, you are missing the contemporary features. Photoshop offers the ability to apply luminosity masks with ease. It can also automatically apply adjustment layers and also give you luminosity options. The most important feature Adobe Photoshop has is the ability to use multiple masks. You can pick and choose which masks to be used with your layered image, and the software will adjust accordingly. The only feature that could be better is the ability to *scroll through* different mask selections without having to rotate and spin the image. If you are wanting to improve the appearance of something, Photoshop can correct colors efficiently. Color correction can remove color blemishes or variants, isolate certain colors, adjust blend modes and the like. It is a great feature. Remix is available for photos and other layers, but you can only remix one layer at a time. You have to go back and remix other layers even if you are done editing that video.
