Fujifilm X-Pro2 was announced in February 2017 and was developed by the same team that developed *X-E1*, which was launched on February 2015 with 4K video recording capabilities. X-Pro2 has a 16MP BSI CMOS sensor, which is similar to the Fuji X-E2, but has a maximum ISO value of 25600. The camera is capable of recording 4K videos and can also shoot in RAW format only. It also has a massive amount of connectivity options, even allowing connectivity with your home router. It has many advanced features, such as a tilt screen, touch screen, and fast parallax [**surface adjustment technology**]. According to our research of their official website, one of the top features of this camera is its fast autofocus speed, which lets you snap photos with accuracy and precision. Even with face recognition, the camera can easily distinguish faces, helping you to focus your attention on the person you want to photograph. Another important feature of this camera is its image stabilization. It helps you from getting blurry photos, like those that are taken by our mobile phones. Being able to take photos consecutively with a full focus is really convenient, especially since this camera has a tilting display. As is the case with the **OLED** trend, the Fuji **X-Pro2** uses a BSI CMOS sensor, which is similar to the BSI CMOS of the Fuji X-T1. It's 10 times sharper and brighter than the ordinary CMOS sensor. It also provides much-needed security. You can now take precautionary measures when storing your data on a memory card. The camera doesn't let you store the data on the memory card, unless you have made a backup on a computer. So, if the memory card falls out of the camera, you can absolutely be sure that the data will be safe.

The major difference between the two is that Photoshop Elements is a free software package while Photoshop is purchased. If someone is working on a project for a considerable amount of time, Photoshop is better as compared to Photoshop Elements. Photoshop Elements is a good choice for people who just want to edit photos on their PC. Since Photoshop is costing a lot of money, it's better for webmasters to buy it than Photoshop Elements. Adobe Photoshop Elements version is a great photo editing tool that gives you tons of photo editing, cropping and retouching features, some of which are not available in the Adobe Photoshop CC.
