While the core features of Photoshop will remain the same, some of them are getting new capabilities with new native APIs (Application Programming Interfaces). On November 30, we announced that we've been acquired by Silicon Valley-based, technology-focused investment firm, Third Point, led by Daniel S. Loeb. Our vision is to make the world's best design tools for everyone. We're building on this legacy and expanding our product portfolio, including products like On1's On1 Read and Type, and now with our new app architecture and native GPU support on the web, to bring all that to everyone. What we've achieved as a company is absolutely remarkable in the look and feel of the products we've produced, and the extent to which we've expanded and grown. We're dedicated to workability and pursuit of what is possible, and we will continue to deliver amazing experiences to our customers every single day. We are now working on an entirely new platform architecture for Photoshop Photo that allows Photoshop to more fully integrate with new features and capabilities that drive the evolution of images - including the latest AI capabilities. New features will also make it possible for users to create experiences - such as advanced live drawing and animation - that weren't previously a reality in Photoshop. And with our new app architecture, users will be able to create and use more powerful visual effects, thanks to new tools and full GPU support. In the process, we've been improving the in-app experience with better integration, better performance and better accessibility. The good news is that we've been able to make radical improvements to the Photoshop family while still offering great workability. This will make audiences more productive and intuitive in their workflows.
